

FERTISOL

ORGANIC FERTILIZER

100% ORGANIC FERTILIZER
4-3-3 + OM 62%

A better harvest starts with FERTISOL!

FERTISOL organic fertilizer ensures an optimal working and healthy soil. The composted fertilizer pellets contain a high percentage of organic matter, have water retaining capacity and are completely free of weeds. FERTISOL is of indispensable value for every type of soil.

The organic matter in FERTISOL provides an airy soil structure through which crops can root more deeply. In addition it improves the soil structure and -fertility. FERTISOL ensures a balanced soil life with a rich addition of nitrogen, phosphate, potassium and other elements such as magnesium, calcium and trace elements. The water retaining capacity is up to three times its own weight and ensures the pellet to be distributed and absorbed properly by the soil. This will save significantly on water consumption.

AGRICULTURE | FRUIT CULTIVATION | HORTICULTURE

A healthy soil is of crucial importance for growing crops and plants. It is important to keep feeding the soil and to maintain its top condition. FERTISOL will bring organic matter and other nutrients, into the soil in a sustainable way. FERTISOL is a 100% organic fertilizer and produced using a biological composting technique.

The composting process ensures:

- Complete killing of germs, such as unwanted fungi and bacteria.
- The killing of (oil-bearing) weed seeds.
- High water retaining capacity, up to 3 times its own weight.
- Neutral odour.

The pellets contain a high percentage of organic matter and are rich in nutrients which ensures:

- Improvement of soil structure and -fertility.
- Airy soil structure, which allows crops to root more deeply.
- Balanced and healthy soil life.
- High levels of nitrogen, phosphate and potassium.
- Rich addition of many other elements, such as magnesium, calcium and trace elements.

The nutrients in FERTISOL will be released slowly, making them available for the crop during cultivation. Therefore the pellets have a long-lasting effect and high effectiveness. The pellets are easy to spread out, both mechanically and manually. In addition, the pellets are applicable for every type of soil and all year round (with the exception of frost in the ground).

FERTISOL is certified by Control Union for use in organic farming based on EEC834/2007 and 889/2008 and is OMRI listed. FERTISOL is a product of Komeco; registered producer of organic fertilizers and certified according EU1069/2009.

Average composition and applications

Dry matter	88.0 %	Tomatoes	1,200 - 1,500 kg/ha
Organic matter	62.0 %	Cucumbers	1,200 - 1,500 kg/ha
Nitrogen (N)	4.0 %	Lettuce	1,000 - 1,200 kg/ha
Phosphate (P ₂ O ₅)	3.0 %	Melons	1,200 - 1,500 kg/ha
Potassium (K ₂ O)	3.0 %	Strawberries	1,500 - 2,000 kg/ha
Magnesium (MgO)	1.3 %	Potatoes	800 - 1,800 kg/ha
Calcium (CaO)	10.0 %	Grapes	250 - 500 gr/vine
Trace elements	Mn, B, Mo, Fe and Zn	Fruit trees	2 - 4 kg/tree
